Shearwater Teric
Firmware v09 Release Notes

VERSION 09 2018.08.16

! NOTE This release is not a major feature release. It contains minor improvements and fixes some issues, mostly related to charging. This update is recommended for all users.

IMPROVE Improved the accuracy of the battery gauge, especially when charging.

CHANGE When battery is low, all watch faces will now force display of the battery gauge icon to alert user of low battery status.

CHANGE The "Low Battery" warning now only appears for 5 seconds, then automatically disappears. Previously required user to clear by acknowledging with a button press, but no longer necessary since battery gauge always shown when in low battery state.

CHANGE In CCR mode, now enforces a 6m (20ft) gap between switch up and switch down auto set point switch depths.

CHANGE Changed rules about how AI tank start and end pressures are determined and how average SAC is calculated. These rules will be applied to Cloud and other products with new releases.

FIX Added new time zones for Adelaide +9:30, Newfoundland -3:30, Burma & Cocos Islands +6:30.

FIX Fixed some corner case behaviour when on charger, especially for third-party chargers.

FIX Added ascent rate indicator to gauge mode.

FIX Fixed an issue where removing the Teric from the charger could lock up the display.

VERSION 09 2018.08.16

FIX Fixed an issue that could cause an "Unknown Reset" message from standby. This issue did not cause any other side effects other than the unknown reset message.

IMPROVE Internal improvements to increase production efficiency. No change to end user.

VERSION 07 & 08

Versions v07 and v08 were not publicly released.

VERSION 06 2018.05.28

First public release for the Teric was v06.
